

Summer Research Internship (SRI) at DAU on [Title of the Project]

Faculty Mentor: Prof. Full Name

First Name of the Student, Surname
DEPARTMENT OF COMPUTER SCIENCE
Central University of Andhra Pradesh
Anantapur, Andhra Pradesh, India
skyadav7683@gmail.com
7683019028

Abstract—This document is a $\text{\LaTeX}$ template for the SRI students at DAU. At the conclusion of their internship, the interns are required to submit a technical report using this format.

Index Terms—provide the keywords related to your project, limited to seven.

I. INTRODUCTION

This document is a model and instructions for the SRI report using $\text{\LaTeX}$. Please keep the length of the report to ten pages or less.

A. Background

B. Problem Statement: An Overview

C. Related Works

D. Contributions

E. Notations

Define abbreviations and acronyms the first time they are used in the text, even after they have been defined in the abstract. Abbreviations such as IEEE, SI, MKS, CGS, AC, DC, etc. do not have to be defined. Do not use abbreviations in the title or heads unless they are unavoidable.

F. Overview of the Report

Briefly describe how you have organized the technical content in this report.

II. SYSTEM MODEL

Learn how to use the math mode of $\text{\LaTeX}$. Punctuate equations with commas or periods when they are part of a sentence, as in:

$$a + b = \gamma. \quad (1)$$

Be sure that the symbols in your equation have been defined before or immediately following the equation. Use “(1)”, not “Eq. (1)” or “equation (1)”, except at the beginning of a sentence: “Equation (1) is . . .”

This work was made possible by the SRI program at DAU.

A. Signal Model

B. Detailed Problem Statement

III. PROPOSED APPROACH

A. A Mathematical Derivation

B. Salient Aspects of the Proposed Solution

C. Assumptions behind the Proposed Solution

The following is an example of how to use the itemize environment of $\text{\LaTeX}$.

- Assumption 1
- Assumption 2
- Assumption 3

D. Conceptual Insights

E. Analytical Comparison with Related Works

IV. NUMERICAL RESULTS

Positioning Figures and Tables: Place figures and tables at the top of columns. Avoid placing them in the middle of columns. Large figures and tables may span across both columns. Figure captions should be below the figures; table heads should appear above the tables. Insert figures and tables after they are cited in the text. Use the abbreviation “Fig. 1”, even at the beginning of a sentence.

TABLE I
TABLE TYPE STYLES

Table Head	Table Column Head		
	Table column subhead	Subhead	Subhead
copy	More table copy ^a		

^aSample of a Table footnote.

V. CONCLUSION

A. Summary

B. Future Work

APPENDIX A $\text{\LaTeX}$ -SPECIFIC ADVICE

Please use “soft” (e.g., `\eqref{Eq}`) cross references instead of “hard” references (e.g., (1)). That will make it

Fig. 1. Example of a figure caption.

possible to combine sections, add equations, or change the order of figures or citations without having to go through the file line by line.

Please don't use the `\eqnarray` equation environment. Use `\align` or `\IEEEeqnarray` instead.

A. Some Common Mistakes

- The word “data” is plural, not singular.
- The subscript for the permeability of vacuum μ_0 , and other common scientific constants, is zero with subscript formatting, not a lowercase letter “o”.
- In American English, commas, semicolons, periods, question and exclamation marks are located within quotation marks only when a complete thought or name is cited, such as a title or full quotation. When quotation marks are used, instead of a bold or italic typeface, to highlight a word or phrase, punctuation should appear outside of the quotation marks. A parenthetical phrase or statement at the end of a sentence is punctuated outside of the closing parenthesis (like this). (A parenthetical sentence is punctuated within the parentheses.)
- A graph within a graph is an “inset”, not an “insert”. The word alternatively is preferred to the word “alternately” (unless you really mean something that alternates).
- Do not use the word “essentially” to mean “approximately” or “effectively”.
- In your paper title, if the words “that uses” can accurately replace the word “using”, capitalize the “u”; if not, keep using lower-cased.
- Be aware of the different meanings of the homophones “affect” and “effect”, “complement” and “compliment”, “discreet” and “discrete”, “principal” and “principle”.
- Do not confuse “imply” and “infer”.
- The prefix “non” is not a word; it should be joined to the word it modifies, usually without a hyphen.
- There is no period after the “et” in the Latin abbreviation “et al.”.
- The abbreviation “i.e.” means “that is”, and the abbreviation “e.g.” means “for example”.

An excellent style manual for science writers is [7].
